

## Linking OCULUS Keratograph® to WAVE

## Step1:

Open the OCULUS Keratograph® software, select a Patient, and open a previous examination.

## Step 2:

Go to Settings, then select Miscellaneous Settings.

## Step 3:

A new window opens. Go to **Export** tab. Under **External Software** select Label: **Wave** from the dropdown menu and check the **Active** box.

If you need help installing the WAVE software or linking it to your corneal topographer, please contact WAVE technical support at 1-855.655.2020.

**Step 4:** Check the **Start Application** box and navigate to the **WaveChoice.exe** application. Select and then click on **Open** button.

	] Start applicatio :/Wave/WaveCh	n: noice.exe			
Select Application     → → ↑ □ « Windows (	C:) > Wave	~	õ	Search Wave	/
Organize  New folder  Data  Documents  Temp  WaveFile  Coho Docs  This PC  Documents  Documents  Particle  Documents  Doc	^	Name Data Temp WaveF W unins0 W WaveC W WaveR W ZWave	ile 00.exe Choice.e leg.exe c.exe	xe	₽ • □
> 🔜 Desktop	~	٢			
File <u>n</u> ame: <u>Na</u>	veChoice.exe		~	Application (*	.exe)

**Step 5:** In the **Commandline parameter** box type in **Keratograph** (capital letter **K**). Set **Data will be exported to directory** as **C:\Wave\Data**. Make sure **the box is checked** for Remove old files before export and that the **Zip-File Format box is unchecked**.

Commandline parameter:	
Keratograph	
Data will be exported to directory:	
C:/Wave/Data	
Change directory before export:	
	]
Remove old files before export	
🗌 Zip-File Format	
Create PatientExport.xml	

Step 6: Click on the Save button to complete.

Save
